## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 - 34, 85 – 86 drawn to a method for performing simultaneous critical angle measurements to determine elasticity including elasticity of bone, classified in class 600, subclass 438.
- II. Claims 36 - 62, 87-88 drawn to transducer apparatus and method for elasticity measurements, classified in class 73, subclass 637.
- III. Claims 63-84, 89 drawn to a system and method for measuring bone anisotropy, classified in class 600, subclass 449.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II, III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the method may be practiced by devices which are non-concentric with the transmitter for example. The apparatus may be used for measurements at other than the critical angle.

Inventions III and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP §

Art Unit: 3737

806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it is computer-controlled with an articulating arm not part of the transducer assembly proper. The subcombination has separate utility such as during manually positionable measurements.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group III is not required for Group I, II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication should be directed to Jaworski Francis J. at telephone number 571-272-4738.
